Ivins Fire Report – July 2016

This month the department wide inventory was completed. A new maintenance schedule has been implemented for every item in the inventory. All motorized equipment has been updated and added into iWorks, everything else has been added to an in-house schedule.

Trainings this month consisted of an initial attack of a commercial structure and two standard runs with an equipment maintenance night.

We have initiated a new program that will insure each apparatus has a full run test monthly with at a minimum of once a week the vehicles will flow water. This will assist with lowering the annual maintenance and repair costs, as well as dramatically increasing the experience level and individual improvement of the firefighters.
