Keep Ivins Dark
02/08/2021

To Whom it May Concern:

I am writing to discuss why we should keep Ivins dark. Please keep it this way.

You probably have heard many arguments for why we need more light but I disagree. If you are crashing at night, you are probably going over the speed limit. Saying no to keeping Ivins dark is hurting wild animals. For example, a study from *The Week Junior*, a magazine that is given out weekly for kids and teens, shows that the lights and noises humankind makes causes animals to get confused and can change their reproductive cycles. Also, the people who have telescopes to see beautiful Orion, or Ursa major that were $100-$1,000 bought them for absolutely no reason (I would know, I have one). Second to last reason we should keep Ivins dark is because if you were trying to go to sleep and there are extremely bright lights outside your window, it would be quite annoying. Last one we shouldn't forget about is your electricity bill, you really don't want it to be paying more than you should such as $300 just for keeping lights bright.

Sincerely,

Isabella A
