Subject: Protect Our Night Sky

Council,
I am unclear why this city council team is not fighting for this!!! Even developed Park City is looking to make this a priority. Is it because there is no tax or revenue stream attached to it? No way for the developers on the council to make money from it?

Please read below to protect our night skies!!!

I do support these proposed changes:

- Prohibiting the use of electronic message boards;
- lowering the maximum output on lighting of our national and state flag from 6000 to 1500 lumens;
- grandfathering existing lighting;
- new and revised definitions and minor clean-up language.

I do not support these proposed changes:

- Increasing the color temperature to 4000K for all outdoor lights (up from 2200K for commercial properties and streetlights and 2700K for residential);
- permitting no upper limit on the color temperature of lights if they are motion activated with timers;
- eliminating the requirement to use amber filters to reduce color temperature for streetlights and commercial properties;
- or any other changes.
