Subject: Public Hearing Comment, RV Resort Ordinance

Hi Kari, please distribute to city council for this week's meeting. Thank you.

City Council,

I urge you not to change ORDINANCE NO. 2024-08.

A 6 ft wall is needed to shield views of campers and big rigs parked at this property. It will also provide some buffer to the noise of air conditioners and generators. 6 ft should be measured from 91 not from within the property.

Here is a photo of a RV 'resort'.

Most of them are white and will stand out against our beautiful scenery. This is why we need the 6ft wall as measured from 91. To block them from view as much as possible. If a variation in wall height is necessary, start with 6ft and go higher. I don't think anyone is really going to notice a difference in wall height along 91. People are going to notice all the RVs parked there.

Mr Graf requests lowering the height of the walls to preserve the views from 91 looking southwest to the land hills. If his interest is to preserve those views, an RV Resort should not be built.

If you are inclined to grant the change, I would recommend mock walls be built and RVs parked in different areas before a final decision is made. It will give all of us a chance to view them from 91.

Thank you for your consideration.
