Subject: Re: Ivins Fire Station Roof Repair

Good afternoon Mike,

I have attached the proposal for the roof replacement over the Ivins fire house. I listed the standard TPO as the most cost effective option. This includes a 1/2" insulation that will help add some cushioning for the foul balls from the park. I also included a 60 mil fleeceback option that has a fabric built into the back of the membrane that allows for additional impact protection. The fleeceback option still includes the 1/2" insulation layer. Both 60 mil options include a 20 year option and an optional 25 year warranty with a maintenance plan/schedule. Lastly, I included an 80 mil membrane option that allows me to include a 30 year roof warranty from the manufacturer. The 80 mil option will also include the 1/2" insulation and take more of an impact than the standard 60 mil but at a better budget option than going with an 80 mil fleeceback AND a 30 year warranty. Let me know if you have any questions or would like me to explain anything further.

Thanks again for the opportunity and I look forward to hearing back from you,

Greg Allen
