Burn Season

We are still issuing burn permits throughout the winter and have had lots of days with a great burn index, which helps us address some yard debris buildup with some of our citizens. Our crew members have done several prescribed burns on city property as well as a few of our citizens. Burn permit link- https://washingtoncity.org/burn/?category=burn

Special Events

SCIFR has had quite a few special events in the area with many more ahead. These events are in Snow Canyon State Park, the south hills and areas throughout both cities. We are in

the process of creating a process to accommodate an ambulance standby for these events when there is a larger risk of injury. We also want to address the need for off road/ difficult access for these events. Where appropriate, our side by side may be required for the event.

Blasting

We have been monitoring a company that is blasting for utilities and pools in the Black Desert area. We have had some complaints from citizens that we are addressing. While all the blasts have been measured for seismograph readings, all have been around 25% of what is allowable by state standard. We have been told that they will be completed in the next few months.

SCHS Cheerleading Parade

Snow Canyon High Cheer team finished first in the state competition and we assisted the high school with a parade for the cheerleaders. Our crew members escorted the team on fire apparatus and presented them in front of the school in front of the student body and parents.

Annual Testing

We have been doing our annual fire Pump testing and annual ladder testing on all our ladders. This is one of the pieces that is required for ISO, which ensures that our fire pumps and ladders are in working order for the coming year.

Fire School

Fire Marshal's convention and winter fire school were in the area in January. We had several members of our team involved in the training. Over 1000 firefighters statewide attended fire school this year.

Medic Engine 31 Issues

Ongoing issues with the front-line engine have plagued us over the past couple of months. We have replaced broken front leaf springs, main computer replacement and programming, DEF system repair, multiple oil leaks and air leaks as well as a few other items.
